

Problem Set 3

Bee Nguyen

February 2026

1. How big was the insurance .csv file (once uncompressed)? (i.e. what was the output in 3(e)?)

The insurance.csv file was 5MB.

2. How many lines did the CSV file have before doing the end-of-line (EOL) conversion? (see 3(g))

My result for 3(g) was 0 lines.

3. How many lines did the CSV file have after doing the EOL conversion? (see 3(j))

After converting, the csv file has 36634 lines.
